EXCI Overview ...

- What can you do with EXCI?
  - Anything you want, of course!
    - Send data to CICS
    - Get data from CICS
    - Issue commands to CICS
      - SHUTDOWN won't work!

EXCI Implementation

- Requirements
  - Interregion Communications (IRC) *must* be defined *and* active in the target CICS
  - CONNECTION and SESSION definition
    - ACCESSMETHOD *must* be IRC
    - PROTOCOL *must* be EXCI
    - CONNTYPE
      - *Must* be GENERIC for EXEC CICS LINK interface
      - Can be GENERIC or SPECIFIC for CALL interface
  - VTAM APPLID used to identify target CICS

## EXCI Implementation ...

- Requirements...
  - The Server program *must* be defined to CICS
    - RDO or Program Autoinstall
  - A Transaction Code *must* be defined
    - Transaction definition *must* point to DFHMIRS
    - RDO or use default transaction code of CSMI

## EXCI Programming Interface

- Client and Server programs
  - Batch program is client
  - Server program is CICS application in CICS
  - Communicate via COMMAREA
  - Languages
    - COBOL for VSE
    - PL/I for VSE
    - C for VSE
    - Assembler

## EXCI Programming Interface ...

- Copy books map return code fields for both interfaces
  - In PRD1.BASE for all programming languages
    - Assembler      DFHXCPLD.A
    - COBOL            DFHXCPLD.C
    - PL/I              DFHXCPLL.P
    - C                  DFHXCPLH.H

## EXCI Programming Interface ...

- Client CALL interface
  - 6 different calls
  - Fairly complex
  - Best for multi-request applications
    - Issue multiple DPL\_requests
    - Get/Put multiple file records, etc.
  - Linkedit requirements
    - INCLUDE DFHXCSTB (CICS interface stub)
    - AMODE(31)

## EXCI Programming Interface ...

- Client CALL interface...
  - Initialize\_user call
    - Initialize the user environment
    - Once per task
  - Allocate\_pipe call
    - Allocate a single session for this connection
    - Can allocate up to 25 pipes
    - Generally once per task

## EXCI Programming Interface ...

- Client CALL interface...
  - Open\_pipe call
    - Connect an allocated pipe to a receive session in CICS TS
    - Whenever ready to actually issue DPL calls
  - DPL\_request call
    - Issue actual requests to CICS TS
    - However many times the application requires
    - Appears to server program as normal EXEC CICS LINK from remote CICS TS partition

## EXCI Programming Interface ...

- Client CALL interface...
  - Close\_pipe call
    - Disconnect open pipe from CICS TS
    - Pipe remains allocated
      - Issue Open\_pipe to reuse
    - Whenever finished issuing DPL calls
  - Deallocate\_pipe call
    - Deallocate pipe from CICS TS
    - Generally once per task
